

Student Program/Plan Guide

The student program/plan stack is created by the PeopleSoft Admissions matriculation process. The student program/plan stack first becomes "Active" when a Program Action of "MATR" (matriculation) is inserted.

A student can have multiple program/plan stacks. For each academic career, a student's program/plan stack is grouped by Student Career Number. Each Student Career Number should be recognized as an instance of when a student was admitted and then matriculated into an Academic Program.

Use the **Student Program/Plan** component to view this stack.

Records and Enrollment>Career and Program Information>Student Program/Plan

- 1. Person (ID)** Each time a new member joins the Campus Community, PeopleSoft automatically assigns him/her a unique ID number. This ID will always identify this person, and each Campus Community member will have one ID. Use the ID to most effectively search for students in PeopleSoft.

You can also use **Search/Match** to find any ID where you do not have an SSN or 2P number available to *look up* an ID with the spyglass  feature.

Campus Community>Personal Information>Search/Match

2. Academic Career During the admissions process, applicants are assigned an academic career. **Careers** are levels of academic work that represent the highest grouping of student academic progress. Transcripts are issued by academic career.

Career is similar to the ISIS academic level, except that there are also careers for each professional school and one for continuing education.

Your project team defined 5 careers: an undergraduate career, a graduate career, and careers for each professional school.

Academic Career	Description	Short Description
Contng Ed	Continuing Education	Contng Ed
DMED	Dental Medicine	DMED
Graduate	Graduate	Graduate
Law	Law	Law
Medical	Medical School	Medical
Undergrad	Undergraduate	Undergrad

An ID can be associated with more than one career.

3. Academic Program The **program** is the major controlling variable at the student level. Programs represent academic centers on the Pittsburgh campus and divisions at the regional campuses. A program is, essentially, a school—except that each must be unique within one academic career. Inside each career, programs are the entity that determine to what a student applies and is admitted and from which the student ultimately graduates.

Students can be active at more than one school (in multiple programs); yet one is designated as *primary* each term for enrollment and tuition calculation.

Naming Conventions for programs offered at the Pittsburgh Campus:

The leading character of the academic program code determines the career and/or campus having ownership.

- C** for Continuing Education (CGS only)
- D** for Dental Medicine (1st Professional)
- L** for Law (1st Professional)
- M** for Medicine (1st Professional)
- P** for Graduate Programs at the Pittsburgh campus
- U** for Undergraduate Programs at the Pittsburgh campus

For instance, there are two nursing programs on the Pittsburgh campus; graduate nursing (PNURS) and one for undergraduate nursing (UNURS). Where the code begins with a B, G, J, or T, those characters designate regional campus programs.

Regional Programs noted by first letter of city:

- B** for Bradford Campus Programs
- G** for Greensburg Campus Programs
- J** for Johnstown Campus Programs
- T** for Titusville Campus Programs

See the *Conversion Index* for details about how the project team mapped the old ISIS academic levels to the new academic programs in PeopleSoft.

- 4. Academic Plan** An academic plan is equivalent to a major, minor or certificate (or *academic program* as it was known in ISIS) and has a specific degree or objective tied to it. It is also associated directly to an Academic Program in PeopleSoft.

A valid academic plan is required to activate a student into a term. Select the academic plan for the student. A student can have any number of academic plans within an academic program.

Plan codes were designed using this naming convention:

AN-ELT-BA, where the first group indicates a short description of the area of study, i.e., **AN-ELT** is Anthropology and English Literature. The last group of characters indicates the degree (**BA** for Bachelor of Arts).

- 5. Academic Sub-Plan (optional)** An academic sub-plan is tied directly to an academic plan and considered either an *area of concentration* or an *intended field of study* associated with the University's *undecided* academic plan codes.

Intended majors are identified with an IM suffix, i.e. **ANTH-IM** indicates that Anthropology is the intended major sub-plan where the undergraduate student has not yet declared a major (selected an academic plan). The plan typically remains *undeclared* until the end of the student's sophomore year.

The ISIS equivalent for academic sub-plans was the area of concentration (or ARCO). These were assigned in ISIS, however, at the point of graduation. As a result, the sub-plans are blank for continuing students copied from ISIS.

The *intended major* sub-plan is assigned on the admissions application and activated (in student records) by the admissions matriculation process.
