<p>Cloud computing has emerged as a new paradigm for efficient and highly elastic delivery of computing services over the Internet to achieve economies of scale. The course will explore the concept of Cloud Computing, considering both its benefits and challenges. The course will also cover the basic design principles and architectures of Cloud Computing, including its usability and utility to deliver efficiently and flexibly infrastructure, platform and software as a service. Topics include types of public, private and hybrid cloud computing services, data centers architecture and deployment, cloud computing programming models, virtualization and virtual networking and storage, and large-scale distributed processing framework to manage, process and store big data applications running in clustered systems. The course will also include hands-on projects focused on developing applications on a MapReduce and Hadoop cluster. Upon successfully completing the course of the course, students will gain understating of the goals, benefits and models of cloud computing, and how storage, processing and services are designed and managed in a virtualized environment. They will be able to design and deploy cloud services that operate reliably and at scale, and understand how Main Topics ¿ Introduction and Background -- What is Cloud Computing? ¿ Data Centers Architecture and Deployment ¿ Data Processing on Large Clusters ¿ Parallel Database Management Systems in the Cloud ¿ Higher-Level Languages for Large-Scale</p>

CS 3510 1010 27460 ADV TOPICS IN OPERATING SYSTEMS Seminar 3  
**Bldg:** Sennott Square **Room:** 06516 **Days:** MW **Time:** 11:00 - 12:15 **Instructor:** Lange, John R  
**Class Enrl Cap:** 18 **Class Enrl Tot:** 0 **Class Wait Cap:** 99 **Class Wait Tot:** 0 **Class Min Enrl:** 0  
**Room Characteristics:** PeopleSoft - Scheduled (PS)(1)

CS 3570 1010 27473 ADV TOPICS IN USER INTERFACE Seminar 3  
**Bldg:** Sennott Square **Room:** 05313 **Days:** TuTh **Time:** 11:00 - 12:15 **Instructor:** Biehl, Jacob  
**Class Enrl Cap:** 30 **Class Enrl Tot:** 0 **Class Wait Cap:** 99 **Class Wait Tot:** 0 **Class Min Enrl:** 0  
**Room Characteristics:** PeopleSoft - Scheduled (PS)(1)

"This course will explore emerging topics at the intersection of the fields of human-computer interaction (HCI), systems, and data. The course intends to introduce graduate researchers to important human interaction and interface design considerations in a variety of emerging areas; including IoT, AI and data driven interfaces, voice and conversational interfaces, sensor-driven interactions, mobile and multi-device user experiences, and applications to health, wellbeing, and safety. Students will gain an understanding of foundational HCI and interface design concepts, such as iterative design, experimentation, and evaluation within the context of the course topics, assignments, and projects. Pre-reqs: Graduate-level courses in Systems, Algorithms and Data Structure, and Artificial Intelligence, or permission of instructor.

CS 3720 1010 29388 ADV TOPICS IN INTERNET THINGS Seminar 3  
**Bldg:** Sennott Square **Room:** 06516 **Days:** TuTh **Time:** 09:30 - 10:45 **Instructor:** Lee, Stephen  
**Class Enrl Cap:** 18 **Class Enrl Tot:** 0 **Class Wait Cap:** 99 **Class Wait Tot:** 0 **Class Min Enrl:** 0  
**Room Characteristics:** PeopleSoft - Scheduled (PS)(1)

Advances in technology have made the Internet of Things (IoT) devices more sophisticated and pervasive. This has led to widespread adoption of IoT devices in many domains such as healthcare, home automation systems, transportation, and critical infrastructure. The goal of this course is to explore the recent advances in designing IoT systems through a sequence of readings. We will examine several aspects and techniques of IoT, including security, power and energy management, fault tolerance, cloud, and sensor networks. Students will gain hands-on experience in developing IoT systems, identify the major research challenges in current IoT research, and acquire new scientific tools for research and development. We will drive the class based on student interests, and all students are expected to make at least one presentation and complete a course project in consultation with the instructor.

CS 3900 1010 10875 PHD DIRECTED STUDY Directed Studies 1 - 9

Human Robot Interaction (HRI): The field of Human-Robot Interaction is divided between Social Robotics, in which researchers treat robots as stimuli and are primarily concerned with their effects on people, and HRI, in which researchers are primarily concerned with discovering ways for getting robots to do what we want them to do. This class will provide a broad survey of the field including readings and discussion on Social Robotics but will emphasize issues and research involving the technical side of HRI. These include considering both the human's ability to affect robot behavior (commands, etc.), the robot's ability to affect human behavior (reliability, transparency, etc.), and interaction design to manipulate both to improve performance.

This doctoral seminar introduces to doctoral students the latest research developments on semantic-based and knowledge-based representations of textual information for web search and mining. Along with the further development of natural language processing and data mining techniques, increasingly web search and mining rely on deeper and richer representations of textual information for more advanced search and mining tasks. The goal of this course is to prepare students to work creatively and productively in current web search and mining related tasks. With the focus on the theoretical knowledge and practical

understanding of relevant techniques, this course will help doctoral students to develop a broad understanding and commending skills of semantic and knowledge-based representations. Some representative topics to be covered include entity and relationship-based indexing and retrieval, latent semantic analysis and topic modeling, word and document embedding, and more recent hot topics of deep learning. Upon finishing this course, the students should be able to a. engage in discussions about the latest research achievements on semantic-based and knowledge-based representations of textual information; b. evaluate and adopt major technologies of semantic-based and knowledge-based representations for various web search and mining tasks; c. review a practical web search and mining problem, and develop a valid solution to resolve it; d. utilize open source and other relevant software platforms and toolkits.

LIS	2970	1010	29389	SPECIAL TOPICS	Lecture	3	
<b>Bldg:</b> Information Science <b>Room:</b> 00828 <b>Days:</b> Tu <b>Time:</b> 15:00 - 17:50 <b>OPEN GOVT DATA:</b> CNC, STND, IMP <b>Instructor:</b> Mattern,Eleanor Marie							
<b>Class Enrl Cap:</b> 20		<b>Class Enrl Tot:</b> 0		<b>Class Wait Cap:</b> 99		<b>Class Wait Tot:</b> 0 <b>Class Min Enrl:</b> 0	
<p>This course introduces participants to open data, a term that is assigned to data that are free to access and use, that are available in machine-readable formats, that can be reused for any purpose, and that can be modified and shared by others. Globally, we see conversations about open data in research, with growing expectations and requirements to share research data, and in government, with policies and initiatives to expand public access to datasets. This course will focus on this second category of open data: data produced and shared by government and civic organizations.</p>
